

## REMARKS

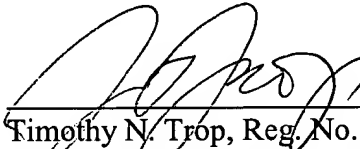

As amended, the claim calls for providing the member data in a shared memory. Then each application is provided a handle to access the shared memory.

In contrast, in Figure 5 of the cited reference, static instance fields 502a are stored separately with each application 310 or 320. In contrast, in the claimed invention, member data may be stored in shared memory and handles may be provided to enable each application to access that member data.

Therefore, as amended, the application should now be in condition for allowance.

Respectfully submitted,

Date: September 17, 2004
